

# PAINT & COATING SOLUTIONS

Protect your process from unwanted foam with our extensive line of expertly crafted defoamers and antifoam products.

## ▶ PAINT & COATING BENEFITS

If you need outstanding foam control technologies in the paint and coating industry, Hydrite Chemical Co. offers a wide range of products to assist in its production and application processes.

Our full line of defoamers, antifoams and air release agents are designed to help both small market and multi-national producers. Our foam control line is designed to work in solvent-borne, water-reducible, water based and 100% active systems. Our products work in paint and coatings based on starting materials such as acrylics, alkyds, epoxy, polyurethane, PVOH, SBR and terpolymers. We also offer free in-lab testing of our product line to help determine the optimum product for your system.

## ▶ FOAM CONTROL PRODUCTS

### Industrial Coatings

- **Patcote® 460** - A specialty solution designed for difficult solvent-borne systems
- **Patcote® 519** - A specialty defoamer formulated for difficult systems where foam is enhanced by high-foaming acrylics
- **Patcote® 890** - Specialty blend designed to combat microfoam in clear coats and epoxies
- **Suppressor 2145** - A specialty silicone compound designed to tackle the toughest foam in many industrial coatings
- **Suppressor 2167** - A solvent dispersed specialty silicone designed for ease of incorporation to solvent-borne systems to prevent “popping”

### Architectural Paints

- **Suppressor 2206** - A specialty blend designed to eradicate foam in alkyds
- **Patcote® 807** - A versatile foam control agent designed to work both in the grind and let-down phases of paint manufacturing
- **Suppressor 2231** - Our workhorse defoamer for water-based paint systems
- **Suppressor 2233** - A relatively low cost approach to foam control in a wide variety of paint systems

## Low to Zero VOC Systems

We are excited to launch our new **Patcote 817** and **Patcote 821** for use in low to zero VOC systems. Both products have proven their merit in lab and field testing. Persistence in both grind and letdown, the products offer the formulator the level of foam control needed to address current issues associated with low to zero VOC systems.
